

The Robot Puzzle

1. Print the puzzle on the next page, on a color printer, if you have one. Or print it in black and white and color it yourself, if you wish.

But don't cheat! Color all the similar types of robots exactly the same.

2. Glue the page onto a piece of heavier paper or half of a file folder.
3. Then, cut out the squares on the lines. Cut right through the robots!
4. Now mix them up, and try to put the puzzle back together again.

Not so easy, is it? There are almost 100 billion wrong ways to put the squares together, but only one right way!

All the cartoon robots on the puzzle are something like the robots NASA is designing to go into space!
